

HEALTH SCIENCE (HLTH)

HLTH 101 Intro to Healthcare Delivery (2 Credit Hours)

Type of credit: Occupational/Technical

Lecture hours: 2

An introductory view of health care is studied in this course through exploration of national and regional practices of health care. Topics of study include careers in health care, projections of health care needs locally as well as globally, access to health care, advocacy for health programs, managing the delivery of health services, diverse populations served in health care and the challenges involved, and an overview of changing health care behaviors. Students will work actively with community resources while studying national and global behavior in comparison.

HLTH 112 Health (2 Credit Hours)

Type of credit: Baccalaureate/Transfer

Lecture hours: 2

Covers the principles of hygiene and community health with an emphasis on basic biological, sociological and psychological facts, and principles underlying health education and physical education.

HLTH 212 First Aid (2 Credit Hours)

Type of credit: Baccalaureate/Transfer

Lecture hours: 2

Studies CPR, accident prevention, and the actions to be taken in cases of accidents and sudden illnesses in the home, school, and community. CPR certification is optional.
